Summary

Computer science student specializing in game development with experience building interactive games, web applications, and mobile apps using Unity, React, and React Native. Strong foundation in programming languages (C++, C#, and Python) combined with a growing passion for graphic design and digital art. Experienced in UI/UX design, visual layout, and creative problem-solving, blending technical development with artistic thinking. Currently seeking opportunities in software or IT roles while continuing to grow in creative and design-focused work.

Education

Bachelor of Science in Computer Science – Game Development Track
De La Salle Lipa, Philippines
Expected Graduation: 2026
Relevant Coursework: Game Programming, Web Development, Data Structures, HCI, Mobile App Development

Senior High School
De La Salle Lipa, Philippines
Graduated: With Honors

Junior High School
Saint Bridget College, Philippines

Elementary School
Casa Del Bambino Emmanuel Montessori, Philippines
Graduated: Achiever/With Honors

Skills

- **Programming Languages:** C++, C#, Python
- **Game Development:** Unity (2D), Rigidbody Physics, Unity 2D Effectors, Collision Detection, Level Design
- **Web Development:** HTML, CSS, JavaScript, React, CRUD Operations, API Integration, State Management (useState)
- **Mobile Development:** React Native, AsyncStorage, Redux-Persist

- **UI/UX & Design:** Figma, Procreate, MediBang, UI/UX Sketching, Digital Illustration, Graphic Design
- **Development Tools:** VS Code, Unity Hub, GitHub

Projects

Game Development

Flappy Bird Clone

- Recreated the classic Flappy Bird game with functional physics and interactive gameplay.
- Designed UI (score, game over, restart) and added sound effects; used Unity's Rigidbody system.
- First solo game project created using Unity completed in one week.

Minesweeper Clone

- Built a functional Minesweeper game replicating classic mechanics.
- Implemented mine placement, recursive tile revealing (DFS), and win/game over screens; designed minefield-style UI.
- Fully playable Minesweeper clone project done solo.

Where's My Water: Pipe Crisis ("Drop the Bucket" Clone)

- Puzzle game inspired by "Where's My Water?" featuring water flow mechanics and playable objects.
- Designed five levels with collision-based interactions and draggable materials; used Unity physics.
- Completed as a solo project with interactive objects per level.

Tricky (Catapult Game)

- Sports-themed 2D catapult game with trick shots and obstacles.
- Used Unity 2D effectors for platform behaviors on projectiles, designed three levels, and implemented limited-shot game conditions.
- Solo project demonstrating 2D physics and level design.

Genius (Wish Solitaire – Game Jam)

- Solitaire card game based on “Wish” with a new Genie mechanic for peeking hidden cards.
- Implemented card layout, matching logic, discard system, and Genie feature.
- Completed two-week Game Jam project done solo.

Web Development

Bookstore Website

- Responsive website displaying static book listings.
- Designed UI and basic page interactions with HTML, CSS, and JavaScript.
- Functional demonstration project.

Portfolio Website

- Personal portfolio to showcase a few projects.
- Built UI components and layouts in React; organized content for display.
- First project created using React, accessible via GitHub.

To-Do List Website

- Dynamic task management web application.

- Implemented CRUD operations using React `useState`; designed interactive UI; styled with CSS.
- Functional solo project testing CRUD operations.

Inventory Management System

- Web-based inventory system with local state updates.
- Implemented full CRUD operations in React components.
- Functional solo project managing inventory data locally.

Mobile App Development

Library Management App (Group Project)

- Mobile app for managing library operations.
- Designed screens and actions for the User and Librarian; implemented add/delete, borrow, search, filter, return, and favorite features for books; and created the app's logo.
- Delivered a functional React Native management app's frontend/UI as part of a three-member team.

Shopping App

- Mobile app for browsing products and managing a shopping cart.
- Implemented static product listings and cart persistence using AsyncStorage and redux-persist; designed UI.
- Solo project providing persistent cart experience.

Job Finder App

- Mobile app for searching and filtering live job listings via JSearch API.

- Integrated API data, implemented search/filter, and designed navigation between screens.

- Solo project displaying live job data and applying for jobs.
